

## Module : Techniques de Communication et d'expression III

### Tutorial 02 *The Scientific Method*

The image below shows a schematic representation of one of biology's greatest finding, Sir Alexander Fleming discovery of Penicillin

Analyze the figure and deduce the steps followed by Sir Alexander Fleming in his scientific research.

### **Module : Techniques de Communication et d'expression III**

**Observation:** In 1928, Sir Alexander Fleming was studying Staphylococcus bacteria growing in culture dishes. He noticed that a mold called Penicillium was also growing in some of the dishes. He also observed that a clear area appeared around the mold since all the bacteria that had grown in this area had died. In contrast no clear areas were present in the culture dishes with no growing mold.

**Hypothesis:**

**Experimentation:**

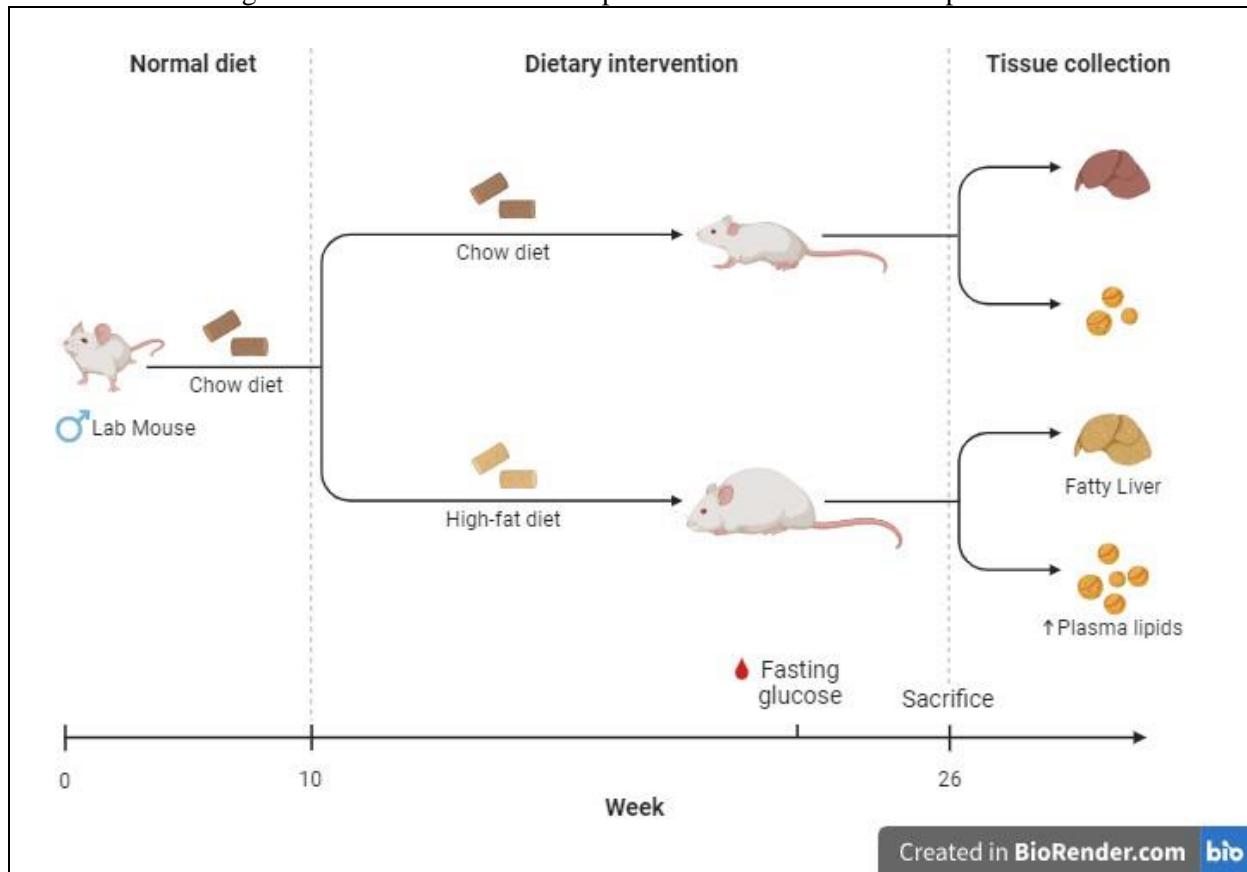

**Results:**

**Conclusion:**

## Module : Techniques de Communication et d'expression III

### Directed Work 01 *The Scientific Method*

The image below shows a schematic representation of a scientific experimentation

Analyze the figure and deduce the hypothesis, the results and the possible conclusion.
